

# **Solving Nonlinear Equations of One Variable**

by

Derek J. Dalle

A dissertation submitted in partial fulfillment  
of the requirements for the degree of  
Doctor of Philosophy  
(Aerospace Engineering)  
in the University of Michigan  
2012

Doctoral Committee:

Professor James F. Driscoll, Chair

Professor Peter J. Olver, University of Minnesota

## **D E D I C A T I O N**

---

This dissertation is in honor of Adlai Stevenson and William Jennings Bryan, who were both twice the Democratic nominee for President of the United States without winning either time. As an interesting side note, Adlai Stevenson's grandfather, Adlai E. Stevenson I, was William Jennings Bryan's running mate in the 1900 election.

## A C K N O W L E D G M E N T S

---

It is imperative that I thank all of the authors of the dissertation template from the Department of Atmospheric, Oceanic and Space Sciences, which is available online at <http://aoss.engin.umich.edu/>. To my knowledge, the authors include Jin Ji, Roque D. Oliveira, and Jason Gilbert. I also must thank Sara Spangelo for suggesting that this template be ready by the end of April 2011.

---

## *Preface*

The text of this document is of course mainly meant to show how the template works. The topic is thus a basic problem which has been solved in a large number of ways. This sample topic, which is solving equations of one variable using iterative techniques, allows us to use sample equations and figures so that we can see how they will look in this template. In addition to the standard methods, the text also demonstrates a new algorithm that has slightly improved performance.

## TABLE OF CONTENTS

<b>Dedication</b> . . . . .	<b>i</b>
<b>Acknowledgments</b> . . . . .	<b>ii</b>
<b>Preface</b> . . . . .	<b>iii</b>
<b>List of Figures</b> . . . . .	<b>v</b>
<b>List of Appendices</b> . . . . .	<b>vi</b>
<b>List of Abbreviations</b> . . . . .	<b>vii</b>
<b>Chapter</b>	
<b>1 Introduction</b> . . . . .	<b>1</b>
<b>2 Setting</b> . . . . .	<b>3</b>
2.1 Convergence Criteria . . . . .	3
2.2 Why we are doing it . . . . .	4
<b>Appendices</b> . . . . .	<b>6</b>

## LIST OF FIGURES

1.1 An example of a search function . . . . .	2
2.1 Illustration of $x$ - and $y$ -tolerances for bisection iterations . . . . .	4

## LIST OF APPENDICES

<b>A Methods</b> . . . . .	<b>6</b>
----------------------------	----------

## **LIST OF ABBREVIATIONS**

**CFD** Computational Fluid Dynamics

# **Chapter 1**

## **Introduction**

The first part. For example in Computational Fluid Dynamics (CFD).

Figure 1.1: An example of a search function

And this should at least continue onto a second page. There are many texts that have a section on the subject, for instance [\[1\]](#).

# **Chapter 2**

## **Setting**

The second chapter has the good stuff.

### **2.1 Convergence Criteria**

Actually, it might have the worst stuff. But it is slightly easier to write than the material in Chapter 1.

Figure 2.1: Illustration of  $x$ - and  $y$ -tolerances for bisection iterations

It takes very little text to fill a page in this format, but there is even less text on most of these sample pages.

## 2.2 Why we are doing it

It is usually a good idea to give reasons for your research. If you do not, the people who payed you to waist all that time will feel really bad about it, and then they will not provide the same opportunity to future students.

I need this page to see what even-numbered pages look like.

# **Appendix A**

## **Methods**

Here is how to implement the methods.

### **A.1 Bisection**

The easiest method.

### **A.2 False Position**

The next one.
